In the Specification

Page 21, change the paragraph beginning in line 9 to read as follows:

--Alternatively, the user is able to manually disconnect the computer system from the communications channels by activating the manual override switch 26. The manual override switch 26 is connected to the first, second and third relays and triggers each upon activation. Upon triggering by the manual override activation switch 26 [[48]], the first relay causes the cable input connector 18 to be disconnected from the cable output connector 38 thereby isolating the computer system from the cable line, the second relay 52 causes the xDSL into input connector 20 to be disconnected from the xDSL output connector 40 thereby isolating the computer system from the xDSL line and the third relay 54 causes the modem input port 22 to be disconnected from the modem output port 42 thereby isolating the computer system from the modem line.--.
